GENERAL ASSEMBLY OF THE COMMONWEALTH OF PENNSYLVANIA  
JOINT STATE GOVERNMENT COMMISSION  
ROOM 108 - FINANCE BUILDING  
HARRISBURG 17120  
717-787-4397  
FAX 717-787-7020

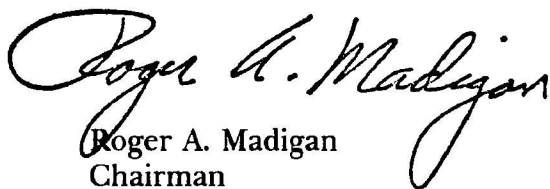

January 23, 1995

TO THE MEMBERS OF THE GENERAL ASSEMBLY:

The Joint State Government Commission is pleased to present this report analyzing the financial costs associated with juvenile violence in Pennsylvania.

The report is part of the support for the Task Force on Violence as a Public Health Concern. Senate Resolution No. 9 of 1993 directed that the Joint State Government Commission undertake a ". . . comprehensive review of the diverse social, health-related, educational and financial costs of urban and rural violence."

Respectfully submitted,

  
Roger A. Madigan  
Chairman

## INTRODUCTION

---

Pursuant to 1993 Senate Resolution No. 9, Pr.'s No. 787, the staff of the Joint State Government Commission has "undertake[n] a comprehensive review of the diverse social, health-related, educational and financial costs of urban and rural violence" in Pennsylvania. The scope of the review was limited to juvenile violence. This report contains the results of that review.

Violent acts committed by and against juveniles in Pennsylvania—persons under age 18—have direct impacts on two groups of Commonwealth citizens: the victims and perpetrators of juvenile violence, as well as their families and friends. In addition, all citizens are affected when various groups in the Commonwealth undertake measures in an effort to prevent juvenile violence. However, the impacts of juvenile violence are not evenly distributed across Pennsylvania: the incidence and cost of juvenile violence is different in the urban and rural areas of the Commonwealth.

To establish the scale of juvenile violence in Pennsylvania, the report first examines the incidence of violence by and against juveniles. Using the incidence of juvenile violence as a base, the report then proceeds to its main focus, an examination of the major costs of juvenile violence. Various elements of the cost associated with the victims and perpetrators of juvenile violence, as well as the prevention of juvenile violence, are identified; separate computations or estimates of these major cost elements are made. Where possible, the urban and rural dimensions of the cost of juvenile violence are separated and analyzed. Violence prevention programs are examined and analyzed. The report concludes with Commission staff recommendations for the future study of the incidence and cost of juvenile violence in Pennsylvania. Appendices contain cost estimation methodologies employed, supplementary tables, and details, risk factors and a survey of public school violence prevention programs which may be of interest to readers. A detailed bibliography is also included.

Data and estimates are included for the incidence and costs for the victims, perpetrators and prevention of juvenile violence in Pennsylvania for 1993 or the latest full year for which data are available and estimates can be made. Both unit and total costs are included. Cost measures include total cost, the most inclusive measure of costs including quality of life losses, and monetary costs, a less inclusive measure of costs including only direct and indirect monetary expenditures. Data and estimates are presented at the county level where possible.

This report does not include two major elements of the cost of juvenile violence: perpetrator costs of adult crimes committed against juveniles, or prevention costs of public school expenditures for security measures. In addition, the Commission staff has included data and made estimates for other costs in a "conservative" manner. Therefore, the Commission staff believe that the total cost of juvenile violence presented in this report is considerably understated.

## EXECUTIVE SUMMARY

---

In 1993, an estimated total of 93,895 violent crimes were committed by juveniles, and 94,732 violent crimes against juveniles, in Pennsylvania. Estimated crimes include crimes reported to authorities, and estimated cases not reported to authorities. Violent crimes include murder, voluntary manslaughter, rape, robbery and assault, plus acts of child abuse. A total of 5,133 juveniles were referred to Pennsylvania's Juvenile Justice System for violent crimes. A total of 1,751 juvenile violence cases were substantiated. A total of 678 juveniles were placed for violent acts in residential or alternative treatment programs; the balance of the substantiated cases were disposed of in other ways. However measured, violent acts by juveniles had large and varied impacts on the citizens of Pennsylvania.

The total monetary cost of juvenile violence in the Commonwealth in 1993 is estimated to have exceeded \$1.1 billion. Monetary cost includes direct and indirect expenditures made for the victims and perpetrators of juvenile violent crimes, as well as expenditures made by the Commonwealth, communities and school districts for violence prevention programs. Monetary cost includes victim costs for violent crimes committed by juveniles against other juveniles and adults, and victim costs for violent crimes committed by adults against juveniles. It includes perpetrator costs for violent crimes committed by juveniles against other juveniles and adults, but excludes perpetrator costs for violent crimes committed by adults against juveniles. Victim costs include medical care costs, future earnings losses, public program costs, and property damages and losses. Perpetrator costs include probation costs, detention costs, residential and alternative treatment placement costs and incarceration costs. Prevention program costs include expenditures for Statewide, community and school programs which may be linked to violence prevention.

When quality of life losses are added to victim costs, the total cost of juvenile violence in Pennsylvania in 1993 is estimated to have been more

than \$5.6 billion. The addition of this cost element more accurately accounts for all of the present and future resources related to juvenile violence.

The total victim cost of violent crimes committed against juveniles in Pennsylvania in 1993--including quality of life losses--is estimated to have been nearly \$4.5 billion. Conversely, the total victim cost of violent crimes committed by juveniles is estimated to have exceeded \$2.5 billion. Crimes against juveniles were more costly than crimes by juveniles.

The total perpetrator cost of violent crimes committed by juveniles in Pennsylvania in 1993 is estimated to have been more than \$46 million. This total does not include the perpetrator costs of violent crimes committed against juveniles by adults. Of the total perpetrator cost, about \$26 million was expended for residential and alternative treatment programs.

The total costs of programs which may be attributable to the prevention of juvenile violence in Pennsylvania in 1993 was more than \$108 million.

Comparing expenditures made by Pennsylvania for the victims, perpetrators and prevention of juvenile violence by juveniles, cost estimates show that the Commonwealth spends roughly equal amounts on victims and perpetrators. Expenditures for violence prevention are significant.

Juvenile violence has pervasive impacts on the lives of Pennsylvania citizens which cannot be measured directly or immediately, such as impacts on family structures, careers, and the growth of individuals. Social costs related to juvenile violence are extremely important.

# THE INCIDENCE OF JUVENILE VIOLENCE IN PENNSYLVANIA

---

## VICTIMS OF JUVENILE VIOLENCE

With regard to victims, the incidence of juvenile violence has two dimensions: violent crimes committed by juveniles against other juveniles and adults, and violent crimes committed against juveniles by other juveniles and adults.

### Violent Crimes Committed by Juveniles<sup>1</sup>

In 1993, an estimated total of 93,895 violent crimes (FBI index crimes and acts of child abuse) were committed by juveniles<sup>2</sup> against other juveniles and adults in Pennsylvania: 108 murders and manslaughters (less than 1 percent of the total violent crimes committed by juveniles); 13,509 rapes (14 percent); 9,121 robberies (10 percent); 69,550 assaults (74 percent); and 1,607 acts of child abuse (2 percent). This estimate of the number of violent crimes committed by juveniles includes the actual number of cases reported plus an estimate of the number of crimes committed (and acts of child abuse substantiated) by juveniles which were not reported to authorities.<sup>3</sup>

---

<sup>1</sup>Estimates of the victim incidence and costs of juvenile violence for Pennsylvania were made using the model of Ted R. Miller, Ph.D., National Public Services Research Institute, Landover, Maryland. Data sources are given on each table in this report. The estimation methodology and references are given in appendix A.

<sup>2</sup>For the purpose of this report, juveniles are those persons under age 18.

<sup>3</sup>On the victim side, violent crimes include FBI index crimes (murder, manslaughter, rape, robbery and aggravated assault), simple assault and child abuse (sexual abuse, physical abuse, mental abuse and serious physical neglect). Manslaughter is limited to voluntary manslaughter. Child abuse includes only survivors of abuse; fatalities are included in murders.

Table 1 shows estimates of the violent crimes committed by juveniles in 1993, by crime category, age of victims and county. These estimates show that about two-thirds of the total violent crimes committed by juveniles were committed against other juveniles, and one-third against adults. Rape and assault were the two types of violent crimes most often committed by juveniles against adults. Acts of child abuse by juveniles were relatively low in number. About 50 percent of the total violent crimes committed by juveniles were committed in five counties: Allegheny, Philadelphia, Delaware, Erie and Montgomery. Moreover, over 72 percent of the total violent crimes by juveniles were committed in sixteen "urban" Pennsylvania counties.<sup>4</sup> The urban counties accounted for 82 percent of Pennsylvania's murder and manslaughter by juvenile, 75 percent of the rape, 94 percent of the robbery, 69 percent of the assault, and 60 percent of the child abuse.

#### Violent Crimes Committed Against Juveniles

In 1993, an estimated total of 94,732 violent crimes (FBI index crimes and acts of child abuse) were committed against juveniles by other juveniles and adults in Pennsylvania: 104 murders and manslaughters (less than 1 percent of the total violent crimes committed against juveniles); 21,183 rapes (22 percent); 8,905 robberies (10 percent); 46,632 assaults (49 percent); and 17,908 acts of child abuse (19 percent). The child abuse offenses involved 7,429 sexual abuses (42 percent of the total child abuse offenses); 6,444 physical abuses (36 percent); 585 mental abuses (3 percent); and 3,450 serious physical neglects (19 percent).<sup>5</sup> Again, this estimate of violent crimes committed against juveniles includes actual crimes reported, plus an estimate of the number of crimes committed (and acts of child abuse substantiated) against juveniles which were not reported to authorities.

Table 2 shows estimates of the total violent crimes committed against juveniles in 1993, by crime category and county. These estimates show that over 7 out of 10 of the violent crimes committed against juveniles involved rape or assault. Acts of child abuse amounted to almost 19

---

<sup>4</sup>The urban counties are Allegheny, Beaver, Berks, Bucks, Cambria, Cumberland, Dauphin, Delaware, Erie, Lackawanna, Lehigh, Luzerne, Montgomery, Northampton, Philadelphia and Westmoreland. In these counties, urban population is 60 percent or more of total population (1980 census). The Atlas of Pennsylvania. Philadelphia: Temple University Press, 1989. Table, p. 126.

<sup>5</sup>Child sexual and physical abuse are not included in rape and assault.

percent of the acts of violence against juveniles. About 50 percent of the total violent crimes against juveniles were committed in five counties: Philadelphia, Allegheny, Delaware, Erie and Berks. Almost 71 percent of the total violent crimes against juveniles were committed in the Commonwealth's urban counties. The urban counties accounted for 76 percent of the murder of juveniles in Pennsylvania, 71 percent of the rape, 94 percent of the robbery, 68 percent of the assault, and 66 percent of the child abuse.

### Total Juvenile Violence Cases

Table 3 shows the estimated total number of violent crimes committed in Pennsylvania in 1993, with the estimated percentages of each crime category which involved juveniles as either perpetrators or victims, by county. Juveniles were the victims of about 25 percent of the total violent crimes in the Commonwealth, and the perpetrators of an almost equal percentage of the total. Juveniles were the victims of nearly one-half of total rapes, but the perpetrators of only one-third of total rapes. Juveniles were the victims of all child abuse, but the perpetrators of only about 9 percent of child abuse. Juveniles were the perpetrators of a greater percentage of robbery and assault than they were the victims.

### Violent Crimes Reported by Victims to Authorities

Appendix table 1A shows that there were 27,464 violent crimes committed by juveniles and adults reported to authorities in Pennsylvania in 1993, in which the victims were juveniles. Unlike table 2, appendix table 1 includes only violent crimes reported to authorities. Statewide, for juveniles as victims, there were 104 reported murders and manslaughters (less than 1 percent of these total violent crimes reported); 1,273 rapes (5 percent); 2,721 robberies (10 percent); 15,327 assaults (56 percent); and 8,039 child abuse offenses (29 percent). For child abuse, reported sexual abuse totalled 3,975 (49 percent of the total offenses reported); physical abuse 3,600 (45 percent); mental abuse 150 (2 percent); and serious physical neglect 314 (4 percent).

Appendix table 1B shows that there were 82,866 violent crimes reported in the Commonwealth in 1993, in which the victims were adults. Statewide, for adults as victims, there were 794 reported murders and

1. Assault includes simple and aggravated assault.  
na. Not applicable.

SOURCE: Uniform Crime Report data for 1993 provided by the Pennsylvania State Police. Estimation made by National Public Services Research Institute.

manslaughters (1 percent of these total violent crimes reported); 1,890 rapes (2 percent); 15,933 robberies (19 percent); and 64,249 assault (78 percent).

A few points about the incidence and reporting of juvenile violence should be noted.<sup>6</sup> Child rape is reported to authorities less often than adult rape. Some families may protect a daughter by hiding her rape from authorities (and all other outsiders), even though the mother may be willing to bear the stress of the investigative system if she herself were the rape victim. Juveniles are probably also more often the victims of date rape or rape by acquaintances. In these circumstances, rapists often pressure victims to keep the incidents a secret. In many cases, a family may choose to shield a friend or relative from the authorities.

Rape and robbery are less frequent, but more likely to be reported to authorities, in rural than urban areas. Conversely, rural residents are slightly more likely to "tough out" assaults and not report them.

Juveniles commit the vast majority of assault against other juveniles. These incidents, however, may be handled by other parties—parents or teachers—rather than police. The lower reporting of juvenile assaults also may mean that these assaults typically cause less serious physical injuries than adult assault.

## PERPETRATORS OF JUVENILE VIOLENCE

With regard to perpetrators, the incidence of juvenile violence has the same dimensions noted above. In this report, however, only violent crimes committed by juveniles against other juveniles and adults are included.

---

<sup>6</sup>The analysis of the estimates or data in the following sections were provided by Ted R. Miller, National Public Services Research Institute.

### Juvenile Arrests for Violent Crimes<sup>7</sup>

In 1993, a total of 96,003 juveniles were arrested for allegedly committing violent and nonviolent crimes in Pennsylvania. Of this total, 5,791 juvenile arrests involved violent crimes: 95 murders and manslaughters (2 percent of total juvenile arrests for violent crimes); 270 rapes (5 percent); 2,105 robberies (36 percent); and 3,321 aggravated assaults (57 percent). About 68 percent of the total juvenile arrests for violent crimes were made in five counties: Philadelphia, Allegheny, Delaware, Dauphin and Montgomery. Over 84 percent of the total juvenile arrests for violent crimes were made in Pennsylvania's urban counties. The urban counties accounted for 84 percent of the juvenile arrests for murder and manslaughter, 81 percent for rape, 92 percent for robbery, and 79 percent for aggravated assault. Since 1992, juvenile arrests for violent crimes have increased by about 12 percent; since 1988, these arrests have increased by about 50 percent.

### Juvenile Justice System

The juvenile justice system in Pennsylvania emphasizes treatment and rehabilitation. Juveniles apprehended for alleged offenses can go through the following process:

Arrests. The majority of juvenile delinquency cases are processed by the police. This involves contacting the juvenile's family and, if circumstances warrant, releasing him to the custody of his parents. Charges may be filed by the police and cases forwarded to juvenile probation services.

Juvenile Probation Services. Most referrals to probation are made by police departments after an investigation, although referrals can be made by social workers, schools and other interested parties.

A determination is made on intake on whether the juvenile should be placed in a juvenile detention facility pending his adjudication hearing.

---

<sup>7</sup>On the perpetrator side, violent crimes include FBI index crimes (murder, manslaughter, rape, robbery and aggravated assault). Simple assault and child abuse are not included. The apprehension of a juvenile for alleged delinquent acts, according to Pennsylvania's Juvenile Act, is not referred to as an arrest, but rather as "taking into custody" (42 Pa.C.S. § 6324). This term stresses the less punitive approach taken by the juvenile justice system. The term arrest, however, is used throughout this report.

A probation officer interviews the juvenile to learn specifically about the alleged offense and what role the juvenile may have played, and to obtain a general social history of the juvenile and his family. Whenever possible referrals or dispositions are made to other agencies if it appears to be in the best interest of the juvenile and the community.<sup>8</sup> In the case of violent offenses, a more formal adjudication process often takes place.<sup>9</sup>

The availability of alternative services, such as outpatient counseling or alternative education for juveniles, varies across the State. A juvenile probation officer may agree to send a defendant for these services, but threaten to return him for formal processing of the charges if he does not comply with the conditions arranged by the probation office.

Juvenile Detention Services. Persons detained must be between 10 and 17 years of age and can be held in one of 21 juvenile detention facilities for up to 30 days.<sup>10</sup> A petition for continued detention must be filed within 24 hours after the juvenile is first detained. A detention hearing must be held within 72 hours of initial detention<sup>11</sup> and it must be determined that the juvenile is a threat to the community or may not appear at future hearings, or that placement in other facilities including the parent's home is inappropriate in order to keep him in detention.<sup>12</sup> The median length of stay in detention in 1993 was 11 days for all juveniles. Anecdotal evidence indicates that the length of stay for violent offenders is considerably longer. Statewide, in 1993, an average of 25 percent of the population of juvenile detention centers was comprised of violent offenders.

Assessment and Case Management. When a decision is made to formally proceed with an adjudication hearing before a juvenile court judge, juvenile probation officers must assess the needs of a defendant and plan various treatment or rehabilitative options to recommend to the court.<sup>13</sup> Placements in treatment programs are often based on available bed space "rather than the problems of the juvenile and the services he or she needs."<sup>14</sup>

<sup>14</sup>Report of the Pennsylvania Juvenile Task Force, 1991, p. 43.

Adjudication. A closed adjudication hearing before a juvenile court judge or master determines whether the charges are substantiated. The judge or master then determines if the juvenile is in need of treatment, supervision or rehabilitation.

Disposition. A disposition hearing usually occurs after an adjudication hearing has found the juvenile delinquent. At this hearing the judge or master indicates where a juvenile will be placed, if placement is warranted, or which other alternative services are appropriate.

Juvenile Treatment or Rehabilitative Services. Treatment and rehabilitative services are provided by the Pennsylvania Department of Public Welfare's Youth Development Center/Youth Forestry Camp (YDC/YFC) institutional system; privately-operated institutional programs; and privately-operated community programs, which can include group homes, foster homes, and supervised independent living arrangements.

Within the YDC/YFC system and in a few private programs secure units are established to serve violent offenders and repeat offenders who the judge feels need increased supervision.

Wilderness programs operated by the State and private agencies offer another alternative to serve violent and repeat offenders.

The court also uses a limited number of community services which allow a juvenile to be placed with his family. These include day treatment programs and outpatient counseling services. These services are often used after a juvenile has been in a residential placement program.

Incarceration in the Adult Criminal System. A juvenile court judge may transfer a juvenile to adult court after hearing if the juvenile is at least 14 and the judge finds that there is a prima facie case of delinquency, the charged act would be a felony in adult court, the juvenile is not amenable to treatment in the juvenile justice system and not committable to a mental health or retardation institution and that the interest of the community require the transfer or that an adult would be sentenced to at least three years for the act.<sup>15</sup>

Juveniles charged with murder are treated as adults and immediately placed in the criminal justice system. However, the juvenile

---

<sup>15</sup>42 Pa.C.S. § 6355(a).

may be transferred from criminal court to juvenile court if he shows that he is "amenable to treatment, supervision or rehabilitation as a juvenile. . . ."<sup>16</sup>

Table 4 shows the violent crime cases referred to the juvenile justice system in 1993 by county. Table 5 shows the dispositions for the substantiated cases in the juvenile justice system. Of the substantiated cases, 670 cases (38 percent) were placed in either public or private treatment programs. The remaining 1,081 cases (62 percent) were disposed of in the ways described in table 5.

## PREVENTION OF JUVENILE VIOLENCE

Public health is a multidisciplinary approach to issues harmful to health and is based on preventing disease or injury from occurring. Prevention methods are developed and directed at those at greatest risk of disease or injury. The methods are then evaluated to determine if a method is effective and to determine which among several methods is the most effective.<sup>17</sup> The public health approach has been effective in eliminating or controlling poliomyelitis, diphtheria, and tuberculosis in the United States.<sup>18</sup> In 1983, the Centers for Disease Control established its Violence Epidemiology Branch to study violence using the public health approach.<sup>19</sup>

### Risk Factors for Violent Behavior

Factors which enhance the probability that a child will develop violent tendencies are called risk factors. Factors which shield the child from the effects of the risk factors are called protective factors. Several studies have identified risk and protective factors. The studies and factors are discussed in appendix C. The following is a partial listing of risk factors.

SOURCE: Data provided by Pennsylvania Juvenile Court Judges' Commission, 1995.

Perceived availability of drugs

Easy access to firearms

Community attitudes favorable toward drug use,  
firearms, and crime

Low neighborhood attachment and community disorganization

Poverty

Exposure to violence as a child in the home and community

Failure of parents to supervise and monitor their children

Excessively severe or inconsistent punishment by parents

Family conflict

Domestic violence

Breakdown of the traditional family

Rise in illegitimate births

Increased exposure to violence via television and movies

Poor health care

Pregnancy and birth complications

Low birth weight

Early aggressive or antisocial behavior in school

Low IQ

Hyperactivity, impulsivity—attention deficit, and poor concentration

Academic failure in late elementary school

Broad programs that address these risk factors and emphasize peaceful conflict resolution, improved social skills and improved television

viewing habits are promising violence prevention methods. Early introduction of culturally–adapted prevention programs and the involvement of parents, peers, teachers, and the community make success more likely.<sup>20</sup>

Violence prevention programs operate in certain school districts and communities in Pennsylvania. Programs vary widely in response to local concerns about violence.

### School Programs

There are 501 public school districts in Pennsylvania. While some districts must protect their students from personal violence, other districts' main security concerns regard property protection. The Department of Education does not require the districts to report budget or expenditure data for security and violence prevention. A survey of ten rural and urban school districts reveals some of the programs, personnel and hardware that have been added to our schools to prevent violence and protect our children:

- Conflict Resolution. Teaches children to resolve their disagreements without resorting to violence.
- Peer Mediation. Trains students in mediation techniques so that they can help their fellow students resolve conflicts without physical aggression.
- Drug Abuse Resistance Education (DARE). Teaches drug refusal skills.
- Programs addressing bias and prejudice.
- Alternative Education. Teaches disruptive students apart from the main student population.
- School–Based Probation. Juvenile probation officers located directly in the school. These programs monitor the probationer's school attendance, academic performance, and

---

<sup>20</sup>Albert J. Reiss, Jr. and Jeffrey A. Roth eds., Understanding and Preventing Violence (Washington, D.C., 1993), p. 102.

other issues pertinent to the juvenile's probation. Officers may also participate in programs to identify and help at-risk students.<sup>21</sup>

- Dress codes. Violence sometimes occurs in our schools because of the display of gang colors or because one student wants an article of clothing or jewelry worn by another student. Dress codes and uniforms alleviate this source of violence.
- Uniforms.
- School police.
- Community police surveillance.
- Hall monitors.
- Metal detectors, walk-through and hand-held.
- ID cards.
- Card access systems.
- Closed circuit television and cameras.

A description of the measures adopted by each of the surveyed districts is included in appendix C.

### Community and Statewide Programs

The following are community and Statewide programs which help to prevent violence in Pennsylvania. Some of the programs do not explicitly include violence prevention as an intended purpose. However, they do address risk factors for violent behavior and are therefore included.

Communities That Care. The Communities That Care model identifies risk factors for specific problem behaviors including violence. It also identifies protective factors. The basic idea of the model is that the

---

<sup>21</sup>School-based probation is described more completely in appendix C.

community works together to reduce risk factors and enhance protective factors in order to reduce problem behaviors in the community. The model is discussed more fully in appendix C.

The Children's Cabinet. The Children's Cabinet was established by executive order in 1992. It oversees programs designed to overcome many of the risk and causative factors which are discussed in appendix C. The order states that "children and their families are the highest priority for Pennsylvania state government," "various Commonwealth agencies regulate, operate, and fund services for children," and "all services should be provided in an integrated and coordinated manner."<sup>22</sup> The order states that the Children's Cabinet shall assure that all programs "which serve children and their families are comprehensive, preventive, culturally sensitive, and designed to strengthen families."<sup>23</sup> The Secretaries of Education, Health, and Public Welfare, the Governor's Child Care Advisor, and certain Special Assistants to the Governor are members of the Children's Cabinet. The Governor's Deputy Chief of Staff for Programs and Secretary to the Cabinet chairs the Children's Cabinet.

The Children's Cabinet stated its vision for the future:

Children will grow up healthy and safe and develop into competent citizens who contribute to the community.

In striving for this goal, the Commonwealth's health, education, social services and economic programs must support families so they can provide the best possible homes for their children.

Our programs must invest in primary prevention and early intervention. They must be community driven, culturally relevant and comprehensive. The ultimate system must be inclusive, easily accessible and well integrated.<sup>24</sup>

The Cabinet oversees the Family Centers, Love 'em With A Checkup, Babies First, and Early Intervention programs in Pennsylvania.

---

<sup>22</sup>Executive Order No. 1992--4, Governor Robert P. Casey, September 10, 1992.

<sup>23</sup>Ibid.

<sup>24</sup>The Pennsylvania Children's Cabinet, Children's Cabinet: Building a Brighter Future for Our Children & Families, March 1994, p. 1.

Family Centers. The Departments of Health, Education, and Public Welfare collaborated in developing the Family Centers program to help achieve the Children's Cabinet's goal for the future. The Centers are generally located in schools to involve the parents in the education of their children. They are designed to be a source of information about the services available in the community to families and children. The philosophy of the Centers recognizes that a healthy family unit is the foundation for successful children. The object of the Centers is to help and empower families to become healthy, well-educated and economically independent.<sup>25</sup> Family Centers are required to work to reduce violence in our communities. Family Center providers must attend State-approved training in conflict resolution and then offer the training to the community, families and youth.<sup>26</sup>

Love 'em With A Checkup. The Children's Cabinet initiated this campaign in October 1993 with the goals of reducing the number of low birth-weight babies and improving the health of children in Pennsylvania. A toll-free phone call provides women with information on where to get prenatal and children's checkups and how to pay for them.<sup>27</sup>

Babies First. The Department of Health initiated the Babies First program in Pennsylvania in 1994. The program is designed to provide better health care to pregnant women and provide them with education, nutrition, and counseling services. The goal of the program is to improve infant health in the Commonwealth by reducing our infant mortality rate, lowering the incidence of low birth-weight babies, providing prenatal care, and providing basic preventive health care such as immunizations for babies.<sup>28</sup>

Early Intervention. Early intervention programs have been implemented in every county to help children at risk of

---

<sup>28</sup>The Pennsylvania Children's Cabinet, Children's Cabinet: Building a Brighter Future for Our Children & Families, p. 8; Pennsylvania Department of Health, "Babies First: What It's About."

developmental delays keep pace with their peers academically and socially.<sup>29</sup> Act 212 of 1990 directed the Departments of Education, Health, and Public Welfare to enter an agreement to "establish working relationships that will increase the efficiency and effectiveness of their early intervention services."<sup>30</sup> The Department of Public Welfare is the lead agency for early intervention services for children from birth to two years of age. A total of 11,054 children in this category received services during fiscal year 1993–94. The Department of Education is the lead agency for children from age three to the age when the school district would allow the child to enter first grade.<sup>31</sup> A total of 17,539 children in this category received services during fiscal year 1993–94.<sup>32</sup>

Early intervention programs are to be provided for children who have or are expected to experience developmental delays in "cognitive development, sensory development, physical development, language and speech development, psycho–social development or self–help skills."<sup>33</sup>

Violence Prevention Mini–Grants. The Department of Health began its Violence Prevention Mini–Grant Program in April of 1993 to respond to the public health problem violence presents to the Commonwealth. The programs offered by grantees include peer mentorship, conflict resolution training, job skills training, peer mediation, and recreation.<sup>34</sup>

Community Action Programs. Thirty years ago Congress passed the Federal Economic Opportunity Act of 1964, declaring its purpose:

[P]overty continues to be the lot of a substantial number of our people. The United States can achieve its full economic and social potential as a nation only if every individual has the

opportunity to contribute to the full extent of his capabilities and to participate in the workings of our society.<sup>35</sup>

In response to the Economic Opportunity Act of 1964, the Pennsylvania General Assembly passed an act in 1968 authorizing grants to community action agencies.<sup>36</sup> Although the Economic Opportunity Act does not mention violence prevention, the programs set up under it address some of the problems attendant to poverty that have since been identified as risk factors for violent behavior.

The Pennsylvania Department of Community Affairs, Bureau of Human Resources continues to run a Community Services Block Grant Program. There are 18 categories of services that may be paid for with Block Grant funds: Educational Services, Drug/Alcohol Programs, Consumer Services, Youth Development, Health Services, Housing, Homemaker Services, Legal Services, Nutrition, Outreach and Referral, Recreation, Transportation, Weatherization/Energy, Community Organizing, Employment and Training, Economic Development, Conduct and Administration, and Case Management. Under these categories are such services as literacy training, Big Brother/Big Sister programs, public housing information, nutrition education, and organization of neighborhoods for crime prevention. Clients of the services include families below the federal poverty line and the unemployed who are ex-offenders, handicapped, have documented drug or alcohol abuse problems, or are high school dropouts.<sup>37</sup>

# THE COST OF JUVENILE VIOLENCE IN PENNSYLVANIA

---

## VICTIM COSTS

Juvenile violence—violence by juveniles and violence against juveniles—has impacts on numerous areas in the lives of its victims. Each of these areas contributes an element to total victim costs.

### Elements of Victim Costs

The major elements of victim costs are:

Medical care costs. Include payments for hospital, physicians and mental health care, as well as rehabilitation, prescriptions, allied health services and medical devices, for the victims of violent crimes. They also include coroner costs, funeral expenses and insurance claim processing costs.

Future Earnings Losses. Include wages, fringe benefits, and the value of housework lost by crime victims and their families, as well as the value of school days lost by victims, as a result of juvenile violence. They also include disability insurance claims processing costs.

Public Program Costs. Include initial police responses and follow-up investigations, as well as emergency medical transport, victim services, and child protective services.

Property Damages and Losses. Include the value of victims' property damage and property taken from victims and not recovered. They also include administrative costs for compensating victims' property losses.

Quality of Life Losses. Include the pain, suffering and other intangible losses resulting from the injury and fear of the victims of violent juvenile crimes. For the survivors of these crimes, quality of life losses are derived from jury awards for pain, suffering, and lost quality of life due to physical injuries and fear. For murder victims, quality of life losses are computed from amounts which people routinely spend (in both dollars and time) to reduce their risk of death and injury.

#### Average Victim Costs by Crime

Table 6 shows estimated average victim costs for Pennsylvania for 1993, by cost element, urban and rural residence, crime category and age of victim. Average victim costs—for both juveniles and adults—vary widely by the types of violent crimes committed. Average victim costs also vary by victim ages and place of residence for the same violent crimes.

Future earnings losses differ significantly for crimes against juveniles and adults.<sup>36</sup> Overall, a juvenile victimization involves a larger productivity loss than an adult victimization. Injured adults often lose work immediately after a crime. Injured children do not lose work, but their parents may. Injured children also may miss school; this loss is valued at the average cost per pupil-hour. In addition, the future earnings over a child's lifetime are larger than for an adult. That means the earnings losses associated with death or permanent disability are larger for a child than an adult victim.

The estimates assume that all Pennsylvania residents of the same age and sex have the same expected future earnings and the same expected lifespan (and thus the same remaining quality of life). Rural adult murder victims have lower lifetime earnings losses than urban ones primarily because the victims are older and thus lose less productive years of life. Similarly, differences in victim age and sex distributions cause the differences in child murder victim losses from adult losses, and in rural versus urban child victim losses.

Urban rape is less likely than rural rape to involve physical injury but more likely to damage a victim's property. On average, child sexual abuse (44 percent of it rape) results in more mental health care and victim

---

<sup>36</sup>The analysis of the estimates or data in the following sections were provided by Ted R. Miller, National Public Services Research Institute.

Table 6

18 and over	635	1,422	104	31	7,571	9,762

1. Because of rounding, detail may not sum to totals.

SOURCE: Estimation made by National Public Services Research Institute.

services costs than adult rape. These offenses are less likely to result in physical injury or damage to victim's property— not surprising since they tend not to involve armed attack.

Urban robbery tends to involve much less money/property loss than rural robberies, perhaps because many of them occur in low income areas and are street crimes. Rural robbery is more likely to leave victims physically injured.

Assault also is substantially more likely to involve physical injury in rural than urban areas. In part, the difference may be in what fights victims choose to view as criminal acts. The assault costs shown here exclude most domestic violence. Domestic violence at national rates was added to the costs for all assault, but is omitted from the other tables since adults are both the victims and perpetrators.

Appendix table 2 shows estimated average victim costs for the U.S. for 1993, by cost element, urban and rural residence, crime category and age of victim. A comparison of appendix table 2 with table 6 shows that estimated average victim costs are higher for Pennsylvania than the U.S. average for each of the cost elements (except quality of life), by urban and rural residence, category and age of victim. Appendix table 3 shows estimated county-level adjustment factors for earnings, health care costs and general costs. The estimated average costs for Pennsylvania in table 6 are derived from the estimated average costs given for the U.S. in appendix table 2 and the county earnings and price adjustment factors given in appendix table 3.

### Total Victim Costs

In 1993, the total victim cost of violent crimes committed by juveniles in Pennsylvania is estimated to have exceeded \$2.5 billion. This estimate is the product of the estimates of the incidence of violent crimes committed by juveniles (see table 1) and the estimates of the average victim costs of violent crimes (see table 6).

Table 7 shows estimates of the total victim costs of violent crimes by juvenile perpetrators, by cost element and county. Statewide, estimated medical care costs for the victims of violent crimes committed by juveniles totalled \$95 million (4 percent of the total victim cost of violent crimes committed by juveniles); future earnings losses \$334 million (13 percent); public program costs \$13 million (1 percent); property damage and losses

1. Because of rounding, county detail may not sum to totals.

SOURCE: Estimation made by National Public Services Research Institute.

\$11 million (less than 1 percent); and quality of life losses \$2.1 billion (82 percent). The five counties with the highest estimated total victim costs for violence by juveniles were Philadelphia, Allegheny, Erie, Delaware and Dauphin. The total victim costs for these counties account for more than 55 percent of the total victim cost of violence by juveniles in Pennsylvania.

Table 8 shows the same estimated total victim cost estimates distributed by crime categories, age of victims and counties. Statewide, the estimated victim costs of murder by juveniles totalled \$404 million (16 percent of the total victim costs of violent crimes committed by juveniles); rape, \$1.3 billion (52 percent); robbery, \$79 million (3 percent); assault, \$635 million (25 percent); and child abuse, \$116 million (4 percent). Violent crimes committed by juveniles against other juveniles accounted for 65 percent of the total victim cost of violence by juveniles; violent crimes committed by juveniles against adults accounted for the other 35 percent.

Table 9 shows the estimated total monetary costs for the victims of violent crimes committed by juveniles, by crime category, age of victim and county. Monetary costs are total costs minus quality of life losses. In 1993, the total monetary cost to the victims of violent crimes by juvenile perpetrators in Pennsylvania is estimated to have been about \$454 million (18 percent of estimated total victim costs including quality of life losses).

In contrast, in 1993, the total victim costs of juvenile violent crimes committed against juveniles in Pennsylvania is estimated to have been nearly \$4.5 billion. This estimate is the product of the estimated incidence of violent crimes committed against juveniles (table 2) and the estimated average victim costs of the violent crimes committed against juveniles (table 6).

Table 10 shows estimates of the total victim costs of violent crimes against juveniles, by cost element and county. Statewide, the estimated victim medical care costs for violent crimes against juveniles totalled \$209 million (5 percent of the total victim cost of violent crimes committed against juveniles); future earnings losses \$413 million (9 percent); public program costs \$38 million (1 percent); property damage and losses \$12 million (less than 1 percent); and quality of life losses \$3.8 billion (85 percent). The five counties with the highest total victim costs for violence against juveniles were Philadelphia, Allegheny, Erie, Delaware and Berks. The total victim costs for these counties account for more than 50 percent of the estimated total victim cost of violence against juveniles in Pennsylvania.

1. Because of rounding, county detail may not sum to totals.

Table 11 shows the same total victim cost estimates distributed by crime categories and counties. Statewide, the estimated cost of the murder of juveniles totalled \$459 million (10 percent of the total victim cost of violent crimes committed against juveniles); rape \$2.2 billion (51 percent); robbery \$77 million (2 percent); assault \$432 million (9 percent); and child abuse \$1.2 billion (28 percent). For child abuse, sexual abuse is estimated to have cost victims \$753 million (60 percent of the total child abuse victim cost); physical abuse \$448 million (36 percent); mental abuse \$16 million (1 percent); and serious physical neglect \$34 million (3 percent).

Table 12 shows the estimated total monetary costs for the victims of violent crimes committed against juveniles, by crime category and county. In 1993, the total monetary cost of violent crimes against juvenile victims in the Commonwealth is estimated to have been about \$673 million (15 percent of total victim costs including quality of life losses).

A comparison of tables 7 and 10 shows that the estimated total victim cost of violent crimes committed against juveniles in Pennsylvania exceeded the estimated total victim cost of violent crimes committed by juveniles in Pennsylvania in 1993 by nearly \$2 billion (73 percent). For juveniles as the victims of violent crimes, estimated medical care costs were \$114 million (120 percent) greater than those for juveniles as the perpetrators of violent crimes; future earnings losses \$80 million (24 percent) greater; public program costs \$25 million (186 percent) greater; property damages and losses \$1 million (7 percent) greater; and quality of life losses \$1.7 billion (80 percent) greater. The difference in the estimated total victim costs for juvenile victims and perpetrators of violence is attributable in part to the slightly higher incidence of violent crimes against juveniles by both juveniles and adults. But more importantly, the cost difference is caused by the types of violent crimes committed against juveniles versus those committed by juveniles. Juveniles are more often the victims than the perpetrators of murder, rape and child abuse--all violent crimes with high medical care costs, future earnings losses, and quality of life losses.

Table 13 shows the estimated total victim cost of violent crimes committed in Pennsylvania in 1993, by crime category, percentage of costs for perpetrators and victims less than 18, and county. Of the \$11.6 billion total victim cost of violent crime in the Commonwealth, \$2.6 billion (22.2 percent) was attributable to juveniles as perpetrators, and \$4.5 billion (38.7 percent) to juveniles as victims. In contrast, recall (from table 3) that about 25 percent of the total number of violent crimes in the Commonwealth were attributable to juveniles as perpetrators, and 25 percent to juveniles

as victims. The relationship between the number and the victim cost of violent crimes by juveniles as perpetrators and victims was explained in the discussion of tables 7 and 10 above.

Appendix tables 4 through 8 show estimated total victim costs related to each of the individual violent FBI index crimes—murder, rape, robbery, assault—and child abuse in Pennsylvania in 1993, by cost element and county.

## PERPETRATOR COSTS

Perpetrator costs are incurred as juveniles are arrested for violent crimes, and authorities make dispositions of the arrest cases through the juvenile justice system of Pennsylvania. As juvenile cases move through this system, elements of perpetrator cost are added.

### Elements of Perpetrator Costs

The major elements of perpetrator costs are:

Probation costs. Include administrative costs, support costs, probation officer salaries and fringe benefits, utility costs and rental costs. Also include costs of services provided to juveniles by probation officers: intake, in-home detention, intensive probation services, aftercare and traditional probation services.

Detention costs. Include staff costs and the costs connected with operating detention facilities, including medical and food services.<sup>39</sup>

Residential treatment program costs. Include the costs of public and privately-operated institutional, community and wilderness programs. Types of programs include: 24-hour out-of-home residential rehabilitation programs, which provide individual and group counseling. These institutional and wilderness programs can include GED preparation and/or vocational training. Community programs (including group homes,

---

<sup>39</sup>Does not include the cost of education in detention. Special education services are provided for all juveniles in detention. No data are maintained on the percentage of juveniles who enter detention and do not require special education services.

foster care and supervised independent living use community resources) which provide education and counseling services, often within the community. Specialized residential programs address the needs of juveniles with drug and alcohol problems, mental health problems and mental retardation; other special units focus on female offenders and sex offenders. These specialized programs can operate within institutional and community settings. Secure units, which serve those violent juveniles and repeat offenders who are at risk to abscond, are located within institutions in most cases.

Alternatives to placement include day treatment, electronic monitoring, outpatient counseling, and purchased intensive probation services.

Incarceration costs. Include incarceration of juveniles in adult correctional facilities. Used only for the most severe cases.

#### Average Juvenile Perpetrator Costs

Table 14 shows estimates for the various elements of average costs, related to the perpetrators of juvenile violent crimes in Pennsylvania in 1993. Average probation costs for cases referred to the juvenile justice system are relatively low, even though this cost element includes both administrative charges and probation services provided to juveniles. Average detention costs for juvenile detention facility admissions are low since 25 percent of the population have been accused of violent crimes.

The two major elements of average juvenile perpetrator cost are related to juveniles placed in treatment programs, and juveniles incarcerated in adult correctional facilities (prisons). Appendix tables 9A through 9C show actual total placements, and estimated average and total costs, for the three types of juvenile treatment programs used in Pennsylvania: private residential and community programs, and State residential programs. These tables include details for individual residential facilities. The estimated cost of treatment in juvenile treatment programs varies significantly by type of program: estimated average costs in State residential treatment programs are nearly 50 percent higher than those in private residential and community treatment programs. Moreover, the estimated average costs of treatment in juvenile treatment programs of all types is more than twice as high as the estimated average cost of incarceration in adult prisons.

Table 14

## ESTIMATED AVERAGE PERPETRATOR COSTS, BY COST ELEMENT, 1993

Cost element	Unit	Unit cost
Probation costs	Referral	\$1,635
Detention costs	Admission	2,495
Juvenile treatment program costs: <sup>1</sup>		
Private residential programs	Placement	33,107
State residential programs	Placement	49,234
Private community programs	Placement	33,870
Average costs	Placement	37,368
Alternate juvenile treatment program costs:		
Private community	Placement	
Adult incarceration costs:		
State prisons	Placement	20,075
County prisons	Placement	16,060

1. See appendix tables 11A through 11C for breakdown of programs by three types. Wilderness program and specialized programs are included in these three program types.

SOURCE: Probation costs - data provided by Pennsylvania Juvenile Court Judges' Commission. See appendix A for methodology. Detention costs - data provided by Pennsylvania Department of Public Welfare. General Assembly Reports for Fiscal 1991-92 and 1992-93. See appendix A for methodology. Juvenile treatment program costs for private residential programs - data provided by Pennsylvania Juvenile Court Judges' Commission. See appendix A for methodology. Alternate juvenile treatment program costs for private community - estimate made by Ron Heinlen, State Association of County Children and Youth Administrators Association. Adult incarceration costs for State prisons - projection of 1986 data contained in A Study of Pennsylvania Juveniles Transferred to Criminal Court in 1986 applied to 1993 statistics.

### Total Juvenile Perpetrator Costs

In 1993, the total perpetrator cost of violent crimes committed by juveniles in Pennsylvania is estimated to have been more than \$46 million.

Table 15 shows estimated total perpetrator costs, by cost element, for 1993. These estimates show that juvenile residential placement programs (including alternates to residential placement programs) were by far the largest element of cost, comprising almost 55 percent of estimated total juvenile perpetrator costs for violent crimes. Temporary detentions accounted for 20 percent, and probations 18 percent, of the total cost. Juvenile incarcerations in adult prisons comprised about 6 percent of total perpetrator cost.

## PREVENTION COSTS

### School Programs

The ten rural and urban school districts surveyed expect to spend a total of about \$17,600,000 on violence prevention programs, personnel and hardware during the 1994–95 school year. Since only ten of 501 districts are represented, total expenditures cannot be extrapolated from the survey data.

School–Based Probation. School–based probation programs are now in place in 106 school districts in 36 counties. Approximately 3,500 juveniles are on school–based probation each year.<sup>40</sup> Table 16 shows that \$1,408,444 in Federal Drug Control and System Improvement funds were disbursed to school–based probation programs in 28 counties by the Pennsylvania Commission on Crime and Delinquency in calendar year 1993.<sup>41</sup> Local governmental units must come up with matching funds in order to receive this grant money. The amount of the matching requirement for the first year of a program is 25 percent of the federal

grant amount. In the second year the matching requirement is 50 percent of the federal grant amount; in the third year the requirement is 75 percent. After the third year the program can no longer receive federal funds.<sup>42</sup>

### Community and Statewide Programs

Communities That Care. The Pennsylvania Commission on Crime and Delinquency obtained \$265,591 in Federal grant money under the Juvenile Justice and Delinquency Prevention Act of 1974 and distributed it to eight counties in 1994 for the planning process involved in setting up a Communities That Care program. No matching funds were required for counties to receive this money. The allocation of funds is shown by county in table 17.

Family Centers. The Pennsylvania Department of Education provides grants of up to \$250,000 for new Family Centers and up to \$54,000 to upgrade current Family Centers for Child Development to the Family Centers model.<sup>43</sup> A total of \$8,848,459 was allocated to 48 Family Centers in 30 counties in fiscal year 1994-95. Allocations for Family Centers is shown by county in table 17.

Love 'em With a Checkup. The 1994-95 fiscal year budget for the Love 'em With a Checkup campaign is \$1,397,000. \$1.2 million of this amount is from the Department of Health's Federal Maternal and Child Health Block Grant, \$50,000 is from Department of Education funds and \$147,000 is from Department of Public Welfare funds.<sup>44</sup>

Babies First. Eighteen health care providers and five county or municipal health departments in 16 counties were awarded Babies First grants out of the Pennsylvania's Federal Maternal and Child Health Block Grant in 1994. The grant money will be disbursed to the health care providers during the 1994-95, 1995-96, and 1996-97 fiscal years. These grants total \$7,892,559 for the three fiscal years.<sup>45</sup> The total for 1994-95 is \$3,938,137 as shown in table 17.

SOURCE: Pennsylvania Department of Education, "Reference Directory: Family Centers Pennsylvania 1994-95" and "1994-95 Family Center Directors;" Pennsylvania Commission on Crime and Delinquency, "Title V - Delinquency Prevention Program Communities That Care: Planning and Coordination Subgrants;" Pennsylvania Department of Health, Office of Drug and Alcohol Programs, "Violence Prevention Mini-Grant Awards;" Pennsylvania Department of Health, "Babies First Initiative."

Violence Prevention Mini-Grants. A total of 33 grants have been awarded to community groups in 11 counties for a total amount of \$307,382 as shown in table 17.

Early Intervention. For children from birth to two years of age: 29 counties obtain funds and provide services individually. The remaining 38 counties have formed 15 county joiners where several counties obtain funds and work together to provide services to all their clients. Expenditures for services in all counties during fiscal year 1993-94 totalled \$30,708,702, as shown in table 18.

For children from age three to the age when the school district would allow a child to enter first grade: The Department of Education entered Mutually Agreed Upon Written Arrangements (MAWAs) with 28 intermediate units and six school districts to provide services to children in this category. A total of \$50,402,124 was allocated to MAWAs in fiscal year 1993-94.<sup>46</sup>

Community Action Programs. The Department of Community Affairs gave out a total of \$14,297,501 in grants to 44 agencies during fiscal year 1993-94<sup>47</sup> as shown in table 19.

## TOTAL COSTS

Separate costs for the victims, perpetrators and prevention of juvenile violence were estimated and analyzed above. These costs can now be summarized.

SOURCE: Data provided by Pennsylvania Department of Community Affairs, Bureau of Human Resources.

The estimated total cost of crimes committed by and against juveniles in Pennsylvania in 1993--including the quality of life lost by victims--was \$5.6 billion as follows:

Cost	Urban	Rural	Total
(dollars in thousands)			
Victim costs:			
Medical care costs	\$155,774	\$71,812	\$227,586
Future earnings losses	496,578	117,174	613,752
Public program costs	30,154	11,824	41,978
Property damages & losses	9,214	4,483	13,697
Quality of life losses	3,280,495	1,234,565	4,515,060
Total victim costs	3,972,215	1,439,858	5,412,073
Perpetrator costs:			
Probation	na	na	8,392
Detention	na	na	9,251
Residential placement	na	na	25,335
Alternative placement	na	na	500
Incarceration	na	na	2,762
Total perpetrator costs	na	na	46,241
Prevention costs:			
School programs	na	na	na
Community and Statewide programs	na	na	108,768
Total prevention costs	na	na	na
Grand total costs	na	na	5,567,082

Alternatively, total victim costs may be expressed as follows:

Cost	Urban	Rural	Total
(dollars in thousands)			
Violence by juveniles*	\$760,850	\$154,389	\$915,239
Violence against juveniles**	3,211,365	1,285,469	4,496,834
Total victim costs	3,972,215	1,439,858	5,412,073

\*Against adults.

\*\*By juveniles and adults.

In this table, victim costs have been adjusted for double counting, by removing the cost of violence by juveniles against other juveniles from "violence by juveniles," since this cost is already in "violence against juveniles."

Total cost--the most inclusive cost measure--is the most important way to measure the dollar impact of juvenile violence on the Commonwealth, since total cost includes the total value of all present and future resources attributed to the areas affected by juvenile violence.

Alternatively, the estimated monetary cost of crimes committed by and against juveniles in Pennsylvania in 1993--excluding the quality of life lost by victims--was \$1.1 billion, as follows:

Cost	Urban	Rural	Total
(dollars in thousands)			
Victim costs:			
Medical care costs	\$155,774	\$71,812	\$227,586
Future earnings losses	496,578	117,174	613,752
Public program costs	30,154	11,824	41,978
Property damages & losses	9,214	4,483	13,697
Total victim costs	691,720	205,293	897,013
Perpetrator costs:			
Probation costs	na	na	8,392
Detention costs	na	na	9,251
Residential placement costs	na	na	25,335
Alternative placement costs	na	na	500
Incarceration costs	na	na	2,762
Total perpetrator costs	na	na	46,241
Prevention costs:			
School programs	na	na	na
Community and Statewide programs	na	na	108,768
Total prevention programs	na	na	na
Grand total	na	na	1,052,022

Monetary cost—a less inclusive cost measure—is also important, however, since monetary cost includes the monetary value of all present and future resources attributed to the various areas affected by juvenile violence.

It is instructive to compare the expenditures made by Pennsylvania on the victims, perpetrators and prevention of violence by juveniles (these

do not include expenditures related to violence by adults against juveniles). In 1993, the estimated expenditures in these areas were:

Area	Amount (thousands)	Percentage of total
Victims*	\$42,507	22%
Perpetrators	46,241	23
Prevention**	<u>108,768</u>	<u>55</u>
Total	197,516	100

\*Includes public program costs (\$13,436,000), medical care costs (\$28,591,000), and crime victimization payments (\$480,000). For the estimation of medical care costs, see appendix A.

\*\*Includes only community and Statewide program costs; excludes public school program costs (see above).

These estimates show that Pennsylvania spends roughly equal amounts on the victims and perpetrators of violence by juveniles. Prevention program expenditures are significant public expenditures.

## RECOMMENDATIONS FOR FURTHER STUDY

---

After a comprehensive study of the incidence and cost of juvenile violence in Pennsylvania, the Commission staff recommends that the following issues be taken into consideration in future studies of this important subject:

1. Future studies of the incidence and cost of juvenile violence will be improved if they are based on a complete benefit–cost analysis instead of cost analysis alone. Any study based on cost analysis alone is necessarily incomplete. Expenditures for the victims, perpetrators and prevention of violent crimes by juveniles should be measured against the corresponding benefits of these expenditures, since it is the ratio of benefits to costs which should guide the adoption of public policies.<sup>48</sup>

2. Future studies of the incidence and cost of juvenile violence will be improved if more and better data are available for the victims, perpetrators and prevention of juvenile violence in Pennsylvania.<sup>49</sup>

3. Future studies of the incidence and cost of juvenile violence will be improved if they are conducted using trend data, rather than data for a single year. Trend analysis will be easier when data are improved and

---

<sup>48</sup>For example, cost–benefit analysis of the juvenile and adult correctional systems and how they serve violent juvenile offenders could include a comparison of recidivism rates for violent juvenile offenders, and a comparison of sanctions against juveniles in these two systems. A cost–benefit analysis of the State–operated juvenile treatment or rehabilitation system (Youth Development Centers/Youth Forestry Camps) and the privately–operated juvenile correction systems could be examined to see how each handles violent juvenile offenders. Case–tracking could be a part of this study.

<sup>49</sup>For example, more complete cause coding in the hospital data collected by the Pennsylvania Health Care Cost Containment Council will enable cost estimates to be based on Commonwealth–specific data rather than national data. The reporting of violence prevention expenditure data by school districts to the Pennsylvania Department of Education would make violence prevention costs more complete.

a commitment is made to studying juvenile violence in the long-run. It may be that comparisons with other states will be possible in the not too distant future.

4. Future studies of the incidence and cost of juvenile violence will be improved if estimation methods are improved with further research.

5. Future studies of the incidence and cost of juvenile violence will be improved if they include the study of the coordination of violence prevention programs. Duplications or gaps in prevention programs could be identified.<sup>50</sup>

---

<sup>50</sup>For example, the Pennsylvania Children's Cabinet could be examined as a model for prevention programs coordination.

## APPENDIX A ESTIMATION METHODS

---

### ESTIMATING TOTAL CRIMES COMMITTED FROM TOTAL CRIMES REPORTED TO AUTHORITIES<sup>51</sup>

Reported counts of murder, rape, robbery and assault by victim age group come from Uniform Crime Report data provided by the Pennsylvania State Police. Reported counts of child abuse and neglect were extracted from the 1993 ChildLine and Abuse Registry, Pennsylvania Department of Public Welfare.<sup>52</sup>

Many crimes are not reported to the authorities. For rape, reporting rates were estimated using estimated total case by age group derived from national survey data,<sup>53</sup> National Crime Victimization Survey (NCVS) data on reported rates for victims ages 12–17 and ages 18 and over, and Uniform Crime Reports data on total reported rape. These computations used rape victimization estimates net of child sexual abuse.

---

<sup>51</sup>On the victim side, the estimation methodology was provided by Ted R. Miller, Ph.D., National Public Services Research Institute.

<sup>52</sup>In the ChildLine data, each case has five fields for abuse coding. No field was considered primary. Each substantiated case was assigned to an abuse category according to a hierarchy of abuse severity: (1) sexual abuse, (2) physical abuse, (3) mental abuse, and (4) serious physical neglect. The following national definitions of child abuse by type (Sedlak, 1988) were used to correspond to the underreporting rates and costs developed by Miller, Cohen and Wiersema (1994). Sexual abuse: rape, statutory rape, incest, deviate sexual intercourse, and sexual assault. Physical abuse: burns, fractures, skull fractures, subdural hematoma, bruises, welts, lacerations, punctures, brain damage, poisoning, asphyxiation, internal injuries, dismemberment, sprains and dislocations, drowning, and other physical injuries. Mental abuse: promoting prostitution, pornography, and mental injuries. Serious physical neglect: malnutrition, failure to thrive, lack of supervision, medical neglect, other physical neglect, and drugs and alcohol. These national definitions differ only slightly from child abuse definitions in Pennsylvania.

<sup>53</sup>Ted R. Miller, Dean Kilpatrick and Heidi S. Resnick. "Incidence of Rape, Child Abuse, and Child Neglect," Working Paper, National Public Services Research Institute, 1994.

For robbery and assault, rates of reporting by age group and urban–rural residence were applied from the NCVS. It was assumed that all robbery had victims over age 11 and that assault of victims ages 12–17 were underreported at equal rates. The resulting reporting rates by crime category, urban–rural residence and age of victim were as follows:

Crime category	Less than 18		18 and over	
	Urban	Rural	Urban	Rural
Rape	40.9%	57.5%	50.7%	71.3%
Robbery	30.4	32.6	55.2	59.2
Assault	33.2	30.5	48.1	44.2

For child abuse and neglect, the percentage of cases known to ChildLine were estimated using data on cases known to State child protective service agencies and other authorities from the 1986 National Incidence Survey (NIS) on Child Abuse and Neglect<sup>54</sup> and a capture–recapture statistical model.<sup>55</sup> The NIS also provided data on the percentage of physical assault cases reported (which they presumably counted as assaults); police–reported physical abuse was subtracted from the police assault counts to avoid double counting. The resulting substantiation rates by ChildLine of substantiatable child abuse and neglect cases, by child abuse type, were as follows:

Sexual abuse	53.5%
Physical abuse	55.9
Mental abuse	25.6
Serious physical neglect	9.1

<sup>54</sup>Andrea J. Sedlak, Supplementary Analysis of Data on the National Incidence of Child Abuse and Neglect. (Rockville, MD: Westat, 1991).

<sup>55</sup>Miller, Kilpatrick, and Resnick, "Incidence of Rape, Child Abuse and Child Neglect."

## ESTIMATING THE PORTION OF VIOLENT CRIME COMMITTED BY JUVENILES

The estimation of the portion of crimes committed by juveniles was performed differently for three groups of crimes.

For rape, robbery and assault of victims under age 18, the percentages committed by juveniles were obtained from a national sample survey:<sup>56</sup> 44.2 percent for rape, and 94.5 percent for robbery and assault. Juvenile date rape, which is largely attributable to juvenile perpetrators, may impose less lasting harm than other rape; any associated cost differential was ignored.

For murder, rape, robbery and assault of victims ages 18 and over, it was assumed that the percentage of perpetrators who were over age 18 was equal to the percentage of perpetrators over age 18 who were arrested. This is a weak assumption; it probably leads to an overestimate of crimes against adults by juveniles for two reasons: (1) juveniles, being less experienced, may have a greater chance of apprehension than adults, and (2) since juveniles commit most crimes against other juveniles, their arrest rate for crimes committed against juveniles is probably higher than their overall arrest rate, meaning their arrest rate for crimes against adults must be lower than their overall arrest rate.

For child abuse and neglect, the percentage of perpetrators under age 18 was used from ChildLine records. When both an adult and a juvenile participated in abusing a child, the responsibility was ascribed to the adult. When all perpetrator ages were unknown, an adult was assumed to be the perpetrator.

## ESTIMATING VICTIM COSTS PER VIOLENT CRIME

Victim costs per violent crimes are computed primarily using two national data sets:

---

<sup>56</sup>David Finkelhor and Jennifer Dziuba--Leatherman, "Children as Victims of Violence: A National Survey," Pediatrics 94:4 (1994): 413-20.

1. The National Crime Victimization Survey (NCVS), conducted by the U.S. Census Bureau for the National Institute of Justice, polls a sample of the U.S. population about crime victimization and its consequences. Interviews are conducted every six months, with panels of respondents included for six surveys each. Each interview covers only new victimizations, not the long-term consequences of prior victimizations. Most cost per crime computations are separate urban and rural averages from 1987–90 NCVS data.

2. The Detailed Claims Information (DCI) file of the National Council on Compensation Insurance longitudinally tracks injury costs and consequences for a sample of persons suffering disabling workplace injuries. The injury file for the period from 1979 to mid-1988 was used; this file covers some 450,000 injuries.

Victim costs per crime were computed separately for urban and rural areas using the methods described in Miller, Cohen, and Wiersema.<sup>57</sup> The following methods, assumptions and data were used for the various elements of cost:

### Medical Care Costs

For nonhospitalized injuries, medical care costs, are averages from the NCVS data. NCVS medical care and wage loss costs cover only a few months after injuries. For hospitalized injuries, medical care costs come from DCI data. The DCI data were collapsed into NCVS injuries using cause-coded hospital discharge data for rape and robbery/assault with injuries from California, Vermont and Washington, and cause-coded emergency room data from a convenience sample of 21 emergency rooms in 9 communities (including Philadelphia).<sup>58</sup> Because of nonmatches in definitions of "short-term" between the DCI and NCVS files, the health care system's lengths of stay and DCI data were used to compute medical

---

<sup>57</sup>Ted R. Miller, Mark A. Cohen, and Brian Wiersema, "Crime in the United States: Victim Costs and Consequences," Research in Brief, peer Review Draft, National Institute of Justice, Grant #90-IJ-CX-0050, 1994.

<sup>58</sup>All of the data sources coded causes for at least 90 percent of the injuries treated. Although Pennsylvania Health Care Cost Containment Council data will contain cause-coding in the future, the 1993 data included cause codes for only about 10 percent of the injuries treated in Pennsylvania.

costs for hospitalized injuries; for gunshot and knife wounds, costs were computed using Miller and Cohen.<sup>59</sup>

For violence against victims under age 12 (which are not covered by NCVS), medical care costs are computed using Miller, Cohen, and Wiersema.<sup>60</sup> For rape, it was assumed that costs for children are similar to costs for adults. For assault, health care system data were used.

Mental health care treatment rates and payments per case for violent crime victims were estimated using a survey of providers.<sup>61</sup>

### Future Earnings Losses

Lifetime earnings were estimated using age and sex distributions of Pennsylvania urban and rural residents killed or injured, and wage data from the Pennsylvania Department of Labor and Industry. Short-term earnings losses per crime are averages from NCVS data. Using the methods in Miller, Cohen, and Rossman,<sup>62</sup> and Douglass, Kenney, and Miller,<sup>63</sup> lost housework days per adult and lost school days per student were valued from wage days lost per employed victim. Permanent disability probabilities were computed from the DCI data (using the methods in Miller, Pindus, et al.).<sup>64</sup> Lifetime wage and productivity losses were values from the age and sex distributions of violent crime victims, using 1991 data and standard methods.<sup>65</sup>

<sup>65</sup>Dorothy P. Rice, Ellen J. MacKenzie, and Associates, Cost of Injury in the United States, A Report to Congress, (Institute for Health and Aging, San Francisco, CA: University of California, San Francisco and Injury Prevention Center, The Johns Hopkins University, 1989).

### Public Program Costs

Because separate data on violence are unavailable, it was assumed that medically-treated, reported injuries from violent crimes are transported by ambulance and transferred between facilities at the same rates as all injuries seen in emergency departments. Emergency transport rates and costs are national averages from the 1987 National Medical Expenditure Survey. Transfer frequency comes from the National Electronic Injury Surveillance System.

Police investigation costs per reported incident were estimated from police time spent<sup>66</sup> and average police salaries and fringe benefits.

The percentage of medical treatment costs paid by state government was estimated using data from North Carolina. Data were obtained from the North Carolina Trauma Registry (NCTR), which collects cause codes for more than 90 percent of the injuries treated at trauma centers in the state and indicates anticipated payers, and the Medical Commission Data Base (MCDB), which includes all injury discharges in the state and shows the payers billed (but has only 30 percent of the cases cause-coded). The NCTR data show that 15 percent of the hospitalized assault cases are paid by Medicare or Medicaid; the MCDB data show this percentage to be 16.<sup>67</sup> The corresponding patient-paid percentages are 52 and 48, respectively. However, since much of the patient-paid portion ultimately becomes bad debt, and is shifted to other payers as overhead or provided by hospitals as charity, it was assumed (conservatively) that 30 percent of the medical care and mental health treatment for the victims of violent crimes (the public share of third-party payments) is ultimately provided at public expense.

### Property Damage and Losses

Property damages and losses are averages from the NCVS data.

<sup>67</sup>Robert Rutledge, Director, North Carolina Trauma Registry, personal communication with Ted R. Miller, National Public Services Research Institute, December 16, 1994.

### Quality of Life Losses

For murder, quality of life losses were estimated as the average after-tax value of a statistical life,<sup>68</sup> minus average after-tax earnings, fringe benefits and household production; the residual is the value of pain, suffering and lost quality of life.

For pain, suffering, fear and lost quality of life for the survivors of violent crimes, jury awards to crime victims were analyzed.<sup>69</sup> In all, some 300 jury awards to rape victims and almost 1,000 jury awards to assault victims were used in regressions to estimate intangible losses to surviving victims (based on medical costs, earnings losses and victim demographics).

### Price and Wage Adjustment of Costs to Pennsylvania

All victim costs per crime, computed using national or other State data, were adjusted to Pennsylvania using price adjusters (ratios of Pennsylvania costs to national costs). Medical and composite price adjusters were formed using the ACCRA Cost of Living Index, computed for ten areas in Pennsylvania (Allentown, Erie, Harrisburg, Lancaster, Mercer County, Philadelphia, Pittsburgh, Scranton/Wilkes-Barre, Williamsport and York County). Pennsylvania counties were assigned to one or more of these area values.

When national wage rates were used for an estimation, a Pennsylvania wage adjuster was applied (ratio of Pennsylvania wages to national wages). The wage adjuster was formed using county-level data from the Pennsylvania Department of Labor and Industry.

## ESTIMATING THE COSTS FOR JUVENILE PERPETRATORS WITHIN THE JUVENILE JUSTICE SYSTEM

### Estimating Juvenile Probation Costs

The 5,133 referrals of violent offenders represent about 16 percent of the approximately 32,000 juvenile dispositions referred to the juvenile court system in 1993. Cost data for the various functions within a probation office are not maintained. For the purpose of this study, the total cost of the operations of juvenile probation offices was prorated to reflect the percentage of violent offenders in the care of juvenile probation services by county.

### Juvenile Detention Service Costs

The Juvenile Court Judges' Commission provided a breakdown of juveniles placed in detention for violent offenses. They represented 25 percent of all referrals to detention. The total cost for detention services was prorated to reflect the percentage of violent offenders referred in 1993. These figures do not account for the juveniles referred to detention for probation violation or failure to adjust charges where the original charge was for a violent offense nor do they reflect the average length of stay in detention for these juveniles which tend to be longer than the 11 day average for all referrals. Each referral to a detention facility receives special education services even though all referrals do not ordinarily receive these services in their home school district. Special education costs over and above what these juveniles received in their home school districts could not be determined.

### Estimating Juvenile Treatment Program Costs

The Juvenile Court Judges' Commission provided a breakdown of adjudicated violent juveniles by public and privately operated treatment program and by county which placed each offender. The Juvenile Court Judges' Commission Resource Directory provided the cost per day for programs and average lengths of stay. The number of juveniles assigned to a program multiplied by the cost of care per day and average length of stay provided a conservative estimate of cost per program. The average length of stay was based on figures for all delinquents, not necessarily violent offenders.

These data omit some spending on educational services; community programs generally send their residents to public schools. The State Youth Development Center system receives an annual allocation for each of its treatment programs. These figures were divided by the capacity of each facility to obtain the cost per resident, and then multiplied by the number of violent referrals. This was compared to the average cost of educating a juvenile in a school district (data provided by the Department of Education). It should be noted, however, that the allocation used to educate juveniles in the Youth Development System contains funds for special education services in addition to basic education costs.

#### Estimating Alternate Treatment Costs

The Department of Public Welfare's Office of Children, Youth and Family allocates funds to county children and youth programs for alternative services for dependent and delinquent youth. The dollars are not broken out by delinquent and dependent services. Ron Heinlen, the Executive Director of the State County Children and Youth Administrator Organization believes approximately 5 percent of these dollars are used for delinquency programs for violent juvenile offenders.

#### Estimating Adult Incarceration Costs

The Pennsylvania Commission on Crime and Delinquency used data contained in a 1991 analysis, A Study of Pennsylvania Juveniles Transferred to Criminal Court in 1986 (originally prepared for the Pennsylvania Juvenile Court Judges' Commission) to project the dispositions of the 386 juveniles who were certified to adult criminal court in 1993.

APPENDIX B  
SUPPLEMENTARY TABLES

---

# APPENDIX C RISK FACTORS, VIOLENCE PREVENTION PROGRAMS AND SCHOOL DISTRICT SURVEY

---

## Risk Factors for Violence

### Communities That Care

The Communities That Care program is based on the premise that to prevent a problem from occurring, it is necessary to identify the factors that increase the risk of that problem developing and then identify and implement protective factors to reduce the risk.<sup>70</sup> This community program model was developed by Dr. J. David Hawkins and Dr. Richard F. Catalano, professors at the University of Washington, and is growing in popularity across the United States. The Communities That Care model identifies risk factors for specific problem behaviors including violence. The risk factors are grouped into four categories: community risk factors, family risk factors, school risk factors, and individual/peer risk factors.

Community risk factors for violence include the perceived availability of drugs; easy access to firearms; community attitudes and laws favorable toward drug use, firearms, and crime; low neighborhood attachment and community disorganization; and extreme economic and social deprivation.<sup>71</sup> Family risk factors include a family history of high risk behavior, family management problems (lack of clear expectations for behavior, failure of parents to supervise and monitor their children, and excessively severe or inconsistent punishment), family conflict and domestic violence.<sup>72</sup> School risk factors include early aggressive or

---

<sup>70</sup>Developmental Research and Programs, Inc., Communities That Care: Risk—Focused Prevention (Seattle, WA, 1993), p. 3.

<sup>71</sup>Ibid., 3, 4.

<sup>72</sup>Ibid., 5.

antisocial behavior and academic failure in late elementary school.<sup>73</sup> Individual/peer risk factors for violence include early initiation of violent behavior and having friends who are violent.<sup>74</sup>

The Communities That Care model works to counter risk factors by enhancing protective factors. Protective factors are grouped according to individual characteristics, bonding, and healthy beliefs and clear standards.<sup>75</sup> Children who develop a resilient disposition are at a reduced risk for developing violent tendencies. The same is true for children who interact well socially and children who are intelligent.<sup>76</sup> Children who are bonded and committed to positive families, friends, school and community are also at a reduced risk for becoming violent. Also, the individuals that children bond with must have clear, positive behavior standards.<sup>77</sup> Children must be given the opportunity to contribute to their family, friends, school and community. This requires that they be taught the skills necessary to make positive contributions. Positive reinforcement of a child's efforts is necessary for the development of a healthy, contributing member of society.<sup>78</sup>

#### Risk Factors Identified by Other Studies

Other studies have identified risk factors that effect an individual's likelihood of becoming a victim or perpetrator of violence. Exposure to violence as a child, thereby learning that violence is an appropriate response to frustration; poverty; drug or alcohol abuse; and accessibility to lethal weapons are all risk factors according to the Centers for Disease Control.<sup>79</sup>

Former United States Secretary of Education William Bennett prepared the Index of Leading Cultural Indicators in 1993. The Index provides a statistical breakdown of 19 "social indicators" measured in five year increments beginning in 1960 and concludes that in many ways the

---

<sup>74</sup>Ibid., 6, 7.

<sup>75</sup>Ibid., 10.

<sup>76</sup>Ibid., 11.

<sup>77</sup>Ibid., 11.

<sup>78</sup>Ibid., 13.

<sup>79</sup>James A. Mercy and Patrick W. O'Carroll, "New Directions in Violence Prediction: The Public Health Arena," pp. 296–297.

American condition is not good.<sup>80</sup> The figures listed in the report indicate that violent crime is more prevalent during periods of "social decomposition" which is characterized by such trends as breakdown of the traditional family, a rise in illegitimate births and divorce rates, increasing numbers of child abuse victims and children living in poverty, a lowering of SAT scores and an increase in high school dropout rates, and increased exposure to violence via television and movies.

The KIDS COUNT Data Book is an annual profile of child well-being in the United States and was first published in 1990. The book compiles data and ranks the states on ten indicators of child well-being:

Percent low birth-weight babies

Infant mortality rate

Child death rate, ages 1-14

Percent of all births that are to single teens

Juvenile violent crime arrest rate, ages 10-17

Percent graduating from high school on time

Percent teens not in school and not in labor force, ages 16-19

Teen violent death rate, ages 15-19

Percent children in poverty

Percent children in single-parent families.

In addition to the ten well-being indicators, the 1993 KIDS COUNT Data Book focused on the family and listed risk factors that make families vulnerable to breaking up, living in poverty, or having poorly educated children. The factors relate to the mother at the time of the baby's birth and include being unmarried, under the age of 20, and a high school dropout.<sup>81</sup>

---

<sup>80</sup>William J. Bennett, Index of Leading Cultural Indicators (Washington, D.C., 1993), p. i.

<sup>81</sup>The Annie E. Casey Foundation, KIDS COUNT Data Book (Washington, D.C., 1993), p. 13.

The 1994 KIDS COUNT Data Book focuses on the communities where children live. Many children live in "communities that offer too few opportunities for success and too many chances to fail."<sup>82</sup> Five key factors of deteriorating or distressed neighborhoods were identified as high levels of: poverty, female-headed families, high school dropouts, unemployment, and reliance on welfare.<sup>83</sup>

The National Research Council released a report in 1993 explaining that violence probably arises as the result of the interactions of various processes and experiences in a person's life. These factors are grouped into three categories: psychosocial development, biological factors, and social processes.<sup>84</sup> The authors of the report are cautious not to place too much emphasis on the biological factors at this time. "[N]o patterns precise enough to be considered reliable biological markers for violent behavior have yet been identified."<sup>85</sup>

The study found that aggressive and violent behaviors are responses to frustration that children learn through observation.<sup>86</sup> The following were determined to be antecedents of aggressive childhood behaviors and possibly of violent behaviors:

in infancy: pregnancy and birth complication, low birth weight, and an uninhibited, fearless temperament

in the preschool years: fearless behavior, hyperactivity, impulsivity-attention deficit, restless behavior, and poor concentration

in the early school years: daring and risk-taking behavior, poor ability to defer gratification, low IQ, low empathy, and abnormally frequent viewing of violence on television

early family experiences: harsh and erratic discipline, lack of parental nurturance, physical abuse and neglect, poor supervision, and early separation of children from parents

<sup>85</sup>Ibid., 116.

<sup>86</sup>Ibid., 104.

early school experiences: school failure and interactions involving bullying and peer rejection

factors associated with large low-income families, poor housing, criminal behavior by parents and siblings, and living in high-crime neighborhoods.<sup>87</sup>

A major link has been found between various community characteristics and violence rates. Concentrated poverty, high density housing, high density population, weak family and community ties, gun density and drug dealing all contribute to the violence that occurs in our communities.<sup>88</sup>

Broad programs that emphasize the inappropriateness of aggression as a response to frustration, peaceful conflict resolution, improved social skills, and improved television watching habits are promising prevention methods.<sup>89</sup> Early introduction of culturally-adapted prevention programs and the involvement of parents, peers, teachers, and the community make success more likely.<sup>90</sup>

#### Public Schools Respond to Violence

The responses of our school districts to violence vary widely depending on the nature of the problems each district experiences. While some districts must protect their students from personal violence, other districts' main security concerns regard property protection.

School districts approach violence from either a prevention standpoint or an intervention standpoint or both. A school district may offer peer mediation or conflict resolution as part of its curriculum or in special presentations given periodically throughout the school year. These programs teach students to settle their disagreements without resorting to violence.

The following is a sampling of urban and rural school districts in the Commonwealth, some of the programs they have instituted, and cost information where available.

---

<sup>87</sup>Ibid., 105, 106.

<sup>88</sup>Ibid., 132.

<sup>89</sup>Ibid., 107.

<sup>90</sup>Ibid., 108.

### **Chester Upland School District**

Chester Upland School District is an urban district in Delaware County with 7,788 students in grades kindergarten through 12 in one high school, three middle schools, and seven elementary schools. The district periodically offers presentations on peer mediation and has a student ID system. The district employs its own security personnel and pays the City of Chester to have police officers in the schools at a total cost per school year of about \$348,000. Two walk-through metal detectors are located at the entrance of the high school. A security guard and a vice principal man the detectors in the mornings.<sup>91</sup>

### **Clarion Area School District**

Clarion Area School District is a rural district in Clarion County with about 1,100 students in grades kindergarten through 12 and an area of approximately 72 square miles. The district has two schools: one junior/senior high school and one elementary school. The district experiences violence very infrequently with the last incident occurring three years ago. The district has no security personnel and no metal detectors and does not have a problem with weapons. Harassment and fighting are on the increase however so the district wants to initiate a peer mediation program when it becomes possible. Money and personnel are problems with beginning any new program in such a small district where many residents who were coal miners are now out of work or in much lower-paying jobs. The district's priorities at this time are establishing a parent-teacher organization at the high school level and a building fund for remodeling a school building built in 1926.<sup>92</sup>

### **Coudersport Area School District**

Coudersport Area School District is a small rural district in Potter County with 1,000 students in grades kindergarten through 12. Violence

---

<sup>91</sup>Telephone Interview with Eugene Cresta, Business Manager, Chester Upland School District (Nov. 9, 1994).

<sup>92</sup>Telephone Interview with Thomas Shirey, Principal, Clarion Area High School (Nov. 10, 1994).

is not a problem in the district, so they have no programs for prevention or intervention.<sup>93</sup>

### **School District of the City of Erie**

The School District of the City of Erie is a large urban district in Erie County with 11,934 students in grades kindergarten through 12. The district's cost for City Police Officers in the schools this school year is \$88,236. The district spent \$7,910 in 1993 to purchase two walk-through metal detection systems and six hand-held metal detectors. The district's students have ID cards and the district might require ID cards for employees also. Approximately eight cameras have been installed in several buildings at a cost of about \$800 per camera. Other security measures the district takes is minimizing the number of unlocked doors in the buildings during the day and allowing just one door to be used for morning access in most of the buildings.<sup>94</sup>

### **School District of Lancaster**

The School District of Lancaster is an urban district of about 11,000 students in grades kindergarten through 12. At present the district has one high school, four junior high schools, 13 elementary schools, and one secondary alternative school for disruptive students. The district will spend about \$275,000 on security and about \$700,000 to run the secondary alternative school for the 1994-95 school year. It spent about \$200,000 on security for the 1993-94 school year and about \$100,000 the year before that. Five of the schools now have security systems, with the district adding a system to one more school each year at a cost per system of \$10,000. The district pays a security service to monitor the systems at a cost of \$150 per building per month which amounts to \$9000 per year for the monitoring of all five systems.

The district also has a \$60,000 a year contract with Lancaster city to provide dusk to dawn patrolling of the district buildings. These uniformed community service aides perform such activities as checking to

---

<sup>93</sup>Telephone Interview with Edward Goulding, Superintendent, Coudersport Area School District (Nov. 9, 1994).

<sup>94</sup>Telephone Interview with Leroy Ganska, Chief Engineer, School District of the City of Erie (Nov. 9, 1994); Memorandum from Leroy Ganska (Nov. 9, 1994).

make sure doors are locked and inquiring into the status of juveniles found on district property. There are also eleven hall monitors in the district.

Six hand held metal detectors were purchased by the district and each of the six secondary schools has about four planned sweeps per year where students are randomly scanned with the wands. The wands are also used as needed in specific cases. The district contracts with a security company to have two persons present at each sweep at a total cost of about \$2,500 per year.

If a student is caught with a weapon in school he is referred to the judiciary committee of the school board. Most often the student is expelled, except for the occasional event where mitigating circumstances favor allowing the student to remain in school.

Photo ID cards must be worn by all students and staff in the high school and by the management team of the district. Visitors in a school must have visitor's badges. The district is planning an expansion program. A new school will be built for ninth and tenth grades and the building will include a card-access system and closed circuit television for security. The current high school, McCaskey, will house grades 11 and 12 and card-access and closed circuit television will be retrofitted to the school.

Peer mediation and "conflict managers" programs are in place in the district. Both programs promote positive ways to solve conflicts without violence. Student forums are held periodically to discuss the problems of student violence.

The Discipline with Dignity approach to the school environment is being studied and instituted. The idea is for the classroom setting to be more nurturing and to decrease confrontational discipline so that students exhibit fewer problems which could lead to violence.

Drug-Free Schools Program and counseling support groups in the schools offer disruptive students help in developing positive behaviors. The district also has an alternative school at the secondary level which works with disruptive students in a setting outside the school building.

Some high school students serve on the Lancaster County Human Relations Committee to address problems of prejudice and stereotyping and to develop positive relationships. A Human Relations Day seminar addressing the same issues is held each year in the high school.

The community Youth Violence Council of Lancaster is a multi-faceted approach to the problems of youth violence and has representatives from law enforcement, various social agencies and all the county school districts.<sup>95</sup>

### **School District of Philadelphia**

The School District of Philadelphia is a large urban school district in Philadelphia County covering 129 square miles and having a student population of 211,419 in grades kindergarten through 12. The district has 277 schools altogether including 179 elementary schools, 44 middle schools, and 54 high schools and vocational technical schools. The Office for School Safety, covering the school police and the fire marshall's office, has a \$12,700,000 budget for the 1994-95 school year. Only 1.6 percent of the budget goes to the fire marshall's office, leaving \$12,496,800 for school security. The school district police department consists of 265 full-time officers. All the high schools and middle schools and some of the elementary schools in the district have an officer stationed in the school.

All the high schools and middle schools have personnel trained in the use of hand held metal detectors. If the principal of the school determines it is necessary, a search is done of a percentage of the students.

Peer mediation and conflict management are part of the district's curriculum. The costs for these programs are not part of the security budget.<sup>96</sup>

### **Pittsburgh Public Schools**

The Pittsburgh Public Schools is a large urban district in Allegheny County with about 40,000 students in grades kindergarten through 12. There are 86 schools in the district - eleven high schools, 15 middle schools, 54 elementaries and six "special/other" schools for special-needs students. The district has an annual budget of \$2,800,000 for security and violence prevention. The district has a force of 25 unarmed school police

---

<sup>95</sup>Telephone Interviews with George Meshew, Facilities Manager, School District of Lancaster (Sept. 23, 1994; Dec. 5, 1994); Memorandum from George Meshew (Sept. 23, 1994).

<sup>96</sup>Telephone Interviews with John J. McLees, Exec. Dir. for School Safety, School District of Philadelphia (Sept. 21, 1994 and Dec. 23, 1994).

officers and 16 police vehicles including one unmarked car. In October 1994, four school/community police officers began a program of interaction between the school and community to anticipate problems that might be brought into the schools.

There are eight walk-through metal detectors in the district and each school has two hand-held metal detectors. The alternative education schools and two of the high schools have permanent metal detectors used on a regular basis and the other detectors are used on a random basis. A walk-through detector is used at every football game and everyone attending must enter through the detector.

The district has an alternative school for seriously disruptive students with 18 students assigned to it. Its capacity of 30 will be expanded if necessary.

The problem with gangs in Pittsburgh has grown since about the 1985-86 school year, coinciding with the increased drug trade in crack cocaine. Many students are afraid to walk to school because of the drug trade and some stay home from school because of it. Students showing gang colors and insignia can incite violence on buses and at athletic events. School buses driving through warring drug areas are sometimes pelted with rocks due to students displaying gang colors in a bus window. The high schools have dress codes that discourage the wearing of gang colors, but strict enforcement of the dress codes would be time-consuming and costly. Bandannas, however, are never allowed to be worn. Any school in the district where a majority of the parents wants the students to wear uniforms may adopt a uniform policy. Three elementary schools and four middle schools require uniforms.

If a student is found with a gun in school, he is expelled. The first time a student possesses some other type of weapon in school he has an informal in-take conference in juvenile court with his parents and school officials. He then signs a contract agreeing not to carry weapons in school. The second time a student is found with a weapon in school there is a formal hearing in juvenile court.<sup>97</sup>

---

<sup>97</sup>Telephone Interview with Stan Rideout, Chief of Safety, Pittsburgh Public Schools (Nov. 30, 1994).

### **Upper Merion School District**

Upper Merion School District is a suburban district in Montgomery County. Violence is not much of a problem in the district and its total security expenditures for the current school year are expected to be about \$28,500. This includes the cost of having an off-duty police officer patrol the schools on weekends and holidays and \$11,000 to a company to monitor the district's motion and sound detectors.

### **Warren County School District**

Warren County School District is a large rural district with 7,104 students in grades kindergarten through 12. The district covers 930 square miles and has 22 buildings. The district will spend about \$40,000 this school year on student assistance programs, like crisis intervention; DARE, which teaches drug refusal skills; and Drug Free Schools programs. The district received about \$32,500 federal grant money for DARE and Drug Free Schools but this amount will be reduced next year.

The district appreciates the grant money it receives for various programs but emphasizes the difference in operating such a large rural school district compared to other types of districts. Warren County School District has five attendance areas, meaning there are five high schools and the district needs money to do everything five times. Some programs offering grant money have conditions which are inappropriate for Warren County. For example, in order to get a grant for a dropout program, the district was required to target only one school in the district. The district had to put all the grant money into one school where it had only twelve dropouts and none of the money could be used in its other four high schools. Greater flexibility may be needed in some grant programs in order to have the greatest impact on our students.<sup>98</sup>

### **School District of the City of York**

The School District of the City of York in York County is an urban district of 7,277 students in grades kindergarten through 12. The district has one high school, two middle schools, and seven elementary schools and

---

<sup>98</sup>Telephone Interview with Dr. Chester Singer, Dir. of Student Services, Warren County School District (Nov. 9, 1994).

expects to spend a total of about \$627,000 this school year for violence intervention, safety, and security.

The supervisor of attendance and security for the district recommends legislation that would allow school districts to expand school security staff and services. Otherwise even districts that are committed to school safety, will have to downsize their programs as has occurred in York over the past several years.

Conflict resolution instruction is in its beginning stages in the district. Representatives of the school district and the police department have given community presentations on conflict resolution.

The district is also beginning to monitor incidents of violence and compile statistics in order to be able to assess how best to invest its money in the areas of security and prevention.

The School Safety Academy is a five-day training program for district employees including adjuvants, hall monitors, attendance aides, internal suspension aides, and alternative education program staff. Presenting the academy are personnel from the school district, the York City Police Department, the York County Youth Development Center and the Pennsylvania Human Relations Commission. Topics covered in the academy are school district policy and procedure, sexual harassment, court procedure, conflict resolution, school-based probation, search and seizure, gang orientation and intervention, hate crimes and white supremacist organizations, the Pennsylvania Juvenile Act, drugs, coordination of school and police security, practical first aid, adolescent negotiations, and passive restraint.

The district has a zero tolerance policy concerning students possessing weapons in school. The district has hand-held metal detectors that are used only in specific cases where information is received that a student might have a weapon.

The district has a school-based probation program which the York County Commissioners initiated without outside funding. Six part-time officers are assigned to the program. They have developed a Diversion Program in which they attempt to identify students who are at risk of being violent and are in need of services. The students may have multiple summary offenses or be status offenders such as truants and runaways, or their parents may have asked the district for help. A profile is prepared to

help determine which services the child needs. The goal of the Diversion Program is to prevent the student from becoming violent.

The district has 40 to 60 students in its in-house alternative education program at any one time. The students are gradually mainstreamed into the general school population. This program costs the district about \$184,890 per year.

The York County School Attendance and Safety Committee is composed of representatives from the various York County school districts and the District Attorney's Child Abuse Unit. The Committee addresses such issues as truancy, persons who present a risk to the students, gang and hate group activities, and school security.<sup>99</sup>

### School-Based Probation

School-based probation programs are now in place in 106 school districts in 36 counties. Approximately 3,500 juveniles are on school-based probation each year.<sup>100</sup>

Juveniles are generally given the maximum six months probation when the program will be school-based.<sup>101</sup> Juvenile probation officers in the school-based program make sure their clients attend school. If a juvenile probationer is not in school the officer checks on the reason and if the reason is unacceptable the officer picks up the juvenile and takes him to school.<sup>102</sup>

Probation officers meet with their clients during the student's study halls or elective classes to discuss academic performance, attendance, family life and other issues pertinent to the probation agreement. The officers
